

## Fast and Easy preparation of MycroNutrient

Growers are constantly asking us for the simplest and quickest way to handle our products.

There are a couple of things to consider:

1. Time to agitate the concentrate before use

Once agitated, MycroNutrient can be decanted into smaller drums to save agitated each time and so ready for use either to put in tank or for Dosatron.

This agitation process can be automated by setting up a pump system to recirculate content before decanting

Full videos are available at <https://nutrigain.com/blog/>

## 2. Application.

MycroNutrient needs to be diluted before use and most growers use a Dofra type tank

However, there is much quicker and simpler method using a Dosatron Unit
