

# MycroSoap

## The Concept

**MycroSoap** comes out of our R&D testing and growing program over the last three years. The concept was to increase the efficiency of nutrient uptake by the mushroom by making a micro soap formulation which breaks down surface tension in casing soil and gives literally hundreds and thousands of points of contact to mycelium in the casing.

## Features

- Easy to use, just watered onto the crop at numerous stages; case run and between 1<sup>st</sup> and 2<sup>nd</sup> flushes by watering tree, overhead or drip.
- It stimulates production getting the maximum potential from phase 2 or 3 compost.
- Mycelium becomes very strong and healthy, fighting off other mushroom diseases.

## Advantages

- Very low dose rates (0.1-0.2%).
- Less casing diseases.
- No residues.

*Test reports available on request.*
