

Latest Information on MycroNutrient Liquid Supplements

(Organic MycroNutrient / MycroNutrient (MycroDrip)

August 2023

A very important aspect of MycroNutrient liquid supplement is the stimulation of the metabolism of the mushroom mycelium. It is this increase in metabolism that makes the growing mushroom extract more from your compost (higher bio efficiency) **#sustainability**. This combined with the careful balance of extra nutrients we add that the mushroom desires, gives you enhanced yields, mushroom quality and shelf life.

Dilution of MycroNutrient

in 1L/m² same number pins. Better for disease control

in 2L/m² more pin numbers.

2 flush farms

60ml in 1L/m² app + ½ L wash off at early pinning

120ml in 1L/m² app + ½ L wash off on last water between 1st and 2nd flush

3 flush farms

60 ml in 1L/m² app plus ½ L wash off last water of case run.

120ml in 1L/m² app + ½ L wash off on last water between 1st and 2nd flush

Effects of Timing of Dose

Last water in case Run – yield in 1st affected (depending on fill/supplement level).

Early pinning – starts end of 1st flush with more yield / quality in 2nd flush.

Last water between 1st and 2nd flush – starts end of 2nd flush with more yield in 3rd flush.

Disease Protection

Better to have lower dilutions on last water of case run eg 1L/m² watering with light wash off ½L/m².

Dry matter

2nd flush – pinning apps 60ml in 1L/m² plus 120ml-150ml in 1L/m² between 1st and 2nd flush

3rd flush – 120ml-180ml/m² between 1st flush and 2nd flush.

MycroSoap

1-2 ml in 1L/m² on last water of case run (to remain on the surface during pinning)

1-2 ml in 1L/m² on last water between 1st and 2nd flush (to remain on surface)

The dilution can be reduced to ½L/m² if close to venting or for more enhanced effect.

Latest Information on Disinfection and Cleaning

Use 1% for clean conditions

Use 2% for challenged or dirty conditions
