

NutriGain

The magic ingredients to making you more successful

Nutrigain provides natural solutions for making your mushroom crop healthy and increasing your PROFITS.

Nutrigain is at the leading edge in the Mushroom Industry worldwide. It has developed 3rd generation supplements which are added to the growing mushroom crop to increase yield, quality, dry matter and speed up timing.

These new generation products allow growers to 'top up' compost nutrition after heavy 1st flushes which take away more than 50% of the food source for your mushrooms.

Nutrigain provides natural solutions.

MycroNutrient

Key to increasing 2nd and 3rd flush yield by topping up nutrient during crop! This water on 'feed' kicks in as compost nutrition starts to decline after 1st flush, keeping your yield up and your mushrooms healthy.

Applications are made post 1st flush.

- **Increases 2nd & 3rd flush yields (1-3 kg/m²)**
- **Increases shelf life, higher dry matter (+15%) in mushrooms**
- **Increases grade 'A' quality**
- **Mushrooms healthier and less diseases**
- **Apply by watering tree, overhead or drip**
- **Organic Certified status in many countries**

MycroGranule

By adding small doses of specialised carboxylic protein complexes, it works in synergy with our fatty acid liquid supplements making it possible to 'feed' the mushroom much more efficiently during the crop.

- **Increases yield with heavy dense mushrooms on 2nd and 3rd flush**
- **Suitable for all White & Brown Strains**
- **Easy to apply with MycroNutrient via watering system**
- **Feed during the crop**
- **GMO free with NO chemical preservatives**
- **Maximises potential from compost and adding to #sustainability**

MycroSoap

A fatty acid supplement which feeds the mycelium quickly and easily and is a key to increasing 2nd flush. It's 'soap' formulation creates thousands of points of contact to the mycelium when sprayed or fogged on the casing prior to venting.

- **Increases 2nd flush**
- **Mycelium gets strong and healthy**
- **Extremely low dosage rates**
- **Easy to apply; no mixing needed**
- **Less casing diseases**
- **Secondary advantage: Misting and spraying surfaces keeps them clean by trapping things**

"Your Organic MycroNutrient and MycroGranule products has been a game changer for my farm... We are a block farm with compost weights of 84kg/m² phase 3 with 15kg/ton of supplement added at blocking. We are using both products and it has given us a better shape mushroom in the 2nd and 3rd flush. The color of the mushroom has improved.

We pick our 2nd flush over 5 days and 3rd flush over 3 days. Our mushrooms don't open early anymore and are left to grow for an extra day. Mycelium in casing has changed from less fine growth to thicker healthier strands.

Our yield has increased from 34kg/m² to 38kg/m² and we believe that with fine tuning we will be able to achieve 40kg/m² on a consistent basis. We have achieved 40kg/m² twice since starting 4 months ago with these two products. Adding the MycroGranule ourselves lets us experiment to find the optimum amount.

In Conclusion, these two products have made a big difference to our quality and production and they are now a permanent structure in our growing procedure."

Steve Willemse, SjW Mushrooms. Australia

"We have been using Organic MycroNutrient for some time consistently on our white and brown rooms and we definitely see benefits. Better mushrooms on last day of each flush and more consistent 2nd flushes and strong 3rd flush..."

Kieran McKenna, McKenna Mushrooms. Rathfeigh, Ireland

"We have been using MycroNutrient in all our crops for over 10 years when Stuart asked us to test it while they were establishing their patents for it. We have been very happy with the results; we get better quality mushrooms and production. This was very apparent last year when a shipment was delayed, and we ran out for 2 weeks. We are happy to endorse MycroNutrient Liquid."

Lorenzo & Anna Maria Piccioni, Piccioni Bros. Canada

"We have been using Organic MycroNutrient for a number of years now and have seen a marked improvement in both quality and yield. We would highly recommend Nutrigain products." **John McArdle, Orchard Mushrooms. UK**

"We have known and worked alongside Stuart Whitehall for over 30 years and value his expertise in many areas of the commercial mushroom world. We are regular users of Sporekill which we find to be more than adequate. We are currently working very closely with Stuart evaluating the effectiveness of his supplements in our Exotic Mushroom Substrates." **Tim Livesey, Livesey Bros. UK**

Nutrigain for your future.

Nutrigain has a dedicated R&D program to find new solutions to our ever-changing growing environment. During the last 3 years, we have been working on a variety of programs including increasing yield and mushroom hardness on 2nd and 3rd flushes, enhancing nutrition status of the mushrooms, as well as natural solutions to reducing Dry Bubble and Cobweb.

Nutrigain working with Netafim™

Nutrigain is working with Netafim™ to really move quality and yield to a new level. The key is tackling 2nd and 3rd flushes after a heavy first flush. Nutrition is one aspect and we target this with MycroNutrient. However water and casing management is an integral part of this and hence the use of drip irrigation which gives so many advantages to growers. Drip irrigation is future proofed for new 'non peat' casing alternatives as it gives a more continuous watering source during the crop cycle.

INCREASED PROFITS

- Increase yield by 2kg/m²
- Watering at any stage in the crop
- Reduce casing by 20-25% to 35mm
- Reduce energy cost - no drying needed!
- No bacterial blotch
- Dosing MycroNutrient continuously
- Ready for new peat alternatives
